# The Slavery Project
Triangular Trade

Today we will start the construction in Minecraft of you slave sites. You will need access to a computer with Minecraft loaded or an iPad with the paid version of the Minecraft app.

Here are some short videos with pointers if you are new to Minecraft, but hopefully someone in your group has experience with it:
- [For computer](#)
- The iPad is even more simple.

You will have 2 days in class (and for homework) to work on this. This segment of the project is to be handed in one of two ways:
1. Via a screen recording with a voiceover giving a guided tour of your sites with the information that is in your written component.
2. Via a meeting with the teacher set up during extra-help time after school.

- **In Minecraft, construct:**
  - In same groups:
    - Build two sites. Select two from the following list of "regions" then select a specific type of location to recreate:
      - Africa (ex. a slave castle)
      - Middle Passage (ex. a slave ship)
      - New World (ex. a slave auction)
    - In these sites you should demonstrate:
      - Clear knowledge of the Middle Passage and the departure and arrival ports
      - Accurate and relative level of detail in sites
      - Reflection of substantial research evident in sites
      - You will not have complete knowledge or a full picture of these places to base your on the documents provided.
- **Written description of 3D images**
  - Write a brief write-up of each of the two sites
    - Should describe five specific components of each site and why they were included.
    - Should include parenthetical citations from the documents provided.
      - Ex. This is the sentence (document name)
